

YOU HAVE A LOT ON THE LINE.

Your crops are valuable - so are your irrigation and feed systems.

Hydra Clear™ powerful multi-enzyme line cleaner rips through the toughest bio-film build-up and ensures your next growing cycle starts clean. It keeps every inch of your system clear - reducing maintenance and costly downtime.

Easily and consistently purge buildup in feeding lines and systems - with **Hydra Clear™**.

Eliminate unnecessary bio-film bacteria and fungi that accumulates on surfaces and in closed systems.

Save money due to blocked lines, clogged emitters and bio-film residue that can result in lost crops.

Commercial strength formula combines natural bacteria and enzymes in a powerful 1:100 concentration.

**EMERALD
HARVEST®**

SIMPLE, EASY SUCCESS

emeraldharvest.co

The addition of Hydra Clear to the Emerald Harvest product line is part of our effort to look at growing holistically.

Growers want big, beautiful buds that boost profits. To help them do that, we think about the needs of the whole plant, offering base nutrients and supplements that meet all of the plant's nutrient requirements and safeguard it throughout the crop life cycle.

Hydra Clear is the natural next step in our product line.

By clearing away clogs and biofilms, it ensures that the full amount of the investment a grower makes in nutrients actually gets through the feeding system to the plant roots. Hydra Clear maintains better hygiene for better harvests.

Hydra Clear tackles one of the most challenging problems faced by growers who use organic or as-good-as-organic fertilizers: clogging. And it does so without harsh chemicals that harm plants or the environment.

A clog in the feeding system's lines, emitters or drains can result in water or nutrient solution being unevenly applied throughout a garden or grow-op. Some plants might get less water or nutrients than others—perhaps even less than they need—reducing the consistency, quality and yield of harvests.

With its powerful yet safe enzymatic formulation, Hydra Clear is the natural way to eliminate biofilm clogs, eliminating the risk of wasting nutrients and unsatisfactory or inconsistent harvests.

The enzymes in Hydra Clear are:

- derived from both bacteria and fungi
- specially selected to attack clogs and buildup in hydroponic systems
- does not damage roots or beneficial microbes

Hydra Clear can be used:

- 1) Between crop life cycles to clean a hydroponic system thoroughly over the course of an eight-hour treatment
- 2) As a preventative measure by applying a diluted amount during a regular feeding program.

Emerald Harvest Hydra Clear is the safe, clean choice for your garden and the environment.

The statements made herein are based on secondary scientific research into the raw materials in our products. They do not necessarily constitute product claims approved by fertilizer regulators. This information is intended for internal use as educational material the Emerald Harvest team on the science behind our products, including possible benefits and features.

Enzymes are natural cleaners

The enzymes that target unwanted biofilms and accelerate their degradation do not corrode growroom hardware or irritate the colonies of good bacteria living in the roots.

Runoff from an enzymatic cleaner is non-toxic and has much less impact on the environment than a traditional detergent or other biofilm eliminator.
